

Green Pharmacy Pollution Prevention Campaign

+

or

=

Contamination to water, damage to life

The Problem

- Americans dispose of up to \$8 billion in medicines annually
- 80% of medications are improperly disposed in the trash or toilet
- Medicines could affect both wildlife and human embryos
- There is a lack of awareness about the toxicity of pharmaceuticals, and a lack of disposal options

The Solution

- We have identified 3 take-back locations
- We will publish an issue of Symbiosis, the Journal of Ecologically Sustainable Medicine, focusing on pharmaceuticals and personal care products
- We are developing educational brochures
- We are proactively raising funds for this program
